

LIST OF ACCEPTED FULL PAPER

No	Paper Title	Session	Country	1st Author
1	Finite difference analysis of vacuum preloading – a case study	Ground Improvement For Infrastructure Projects	Viet Nam	Nguyen Cong Oanh
2	Finite element analysis of a braced excavation in marine soft clay	Underground Construction & Tunneling	Viet Nam	Nguyen Cong Oanh
3	Sample quality of coarse-grained soil obtained by new type sampler called GS sampler	Monitoring, Inspection And Maintenance	Japan	Fusao Rito
4	Evaluation the key group method in rock slop stability analysis, case study the Hiqer Dam abutments /Evaluation the twin tunnels position effect on surface ground movements (case study: Shiraz Underground Railway)	Underground Construction & Tunneling	Iran	Mehdi Mokhberi
5	Experimental and numerical study on small-size piled raft foundation models subjected to cyclic horizontal loading	Deep Foundations	Japan	Vu Anh Tuan
6	Influence of force ratio and frequency on vibratory surface compaction	Ground Improvement For Infrastructure Projects	Sweden	Carl Wersäll
7	New blow-out models for shallow tunnelling in soft soils	Underground Construction & Tunneling	Netherlands	Vu Minh Ngan
8	Physical modelling of propagation of a grout in porous media. Application in rehabilitation of dam and old railway foundation by injection technique	Ground Improvement For Infrastructure Projects	Viet Nam	Truong Quoc Quan
9	Performance of Large Diameter Cast-in-place Concrete Pipe Pile for piled embankment	Ground Improvement For Infrastructure Projects	Viet Nam	Phan Huy Dong
10	Fundamental Characteristics of Prefabricated Vertical Jute Drain	Ground Improvement For Infrastructure Projects	Australia	Nguyen Thanh Trung
11	Strength and deformation characteristics of peat evaluated by triaxial tests simulating vacuum consolidation with fill construction	Ground Improvement For Infrastructure Projects	Japan	Toshihiro Ogino
12	Application of sand compaction pile for the utilization of excavated soft soil in urban deep excavation work	Underground Construction & Tunneling	Japan	Okamoto Michitaka

13	Clarified mechanism of liquefaction phenomena during earthquake	Underground Construction & Tunneling	Japan	Yukitake SHIOI
14	The physico - mechanical characteristics of soil improvement by combined vacuum and surcharge preloading with PVD	Ground Improvement For Infrastructure Projects	Viet Nam	Nguyen Thi Nu
15	Analysis of the impact of climate change on the landslides along the mountain highway in central Taiwan	Coastal Geotechnics For Climate Change	Taiwan	Keh-Jian Shou
16	Finite deformation analysis on buckling failure of pile when ground liquefied due to earthquake	Deep Foundations	Japan	Hamayoon Kheradi
17	Embankment slope supported by deep mixing columns with a shallow layer reinforcement	Ground Improvement For Infrastructure Projects	Japan	Binh Nguyen
18	Application of vacuum consolidation method for construction of embankment on reclaimed clay ground	Ground Improvement For Infrastructure Projects	Japan	Masato Nakamichi
19	Bridge approach on geotextile encased columns (GEC) under problematic conditions in Northern Germany	Ground Improvement For Infrastructure Projects	Germany	Dimiter Alexiew
20	Excess pore water pressure during construction of precast pile	Deep Foundations	Singapore	Akira Wada
21	In-situ Investigation Technology for Groundwater Flow in Deep Underground	Underground Construction & Tunneling	Japan	Takuya MIURA
22	Surcharge loading design for high embankment construction on soft ground assisted by vacuum consolidation considering the combination of anisotropic and isotropic consolidation: Economical approach	Ground Improvement For Infrastructure Projects	Japan	Toshiaki Kosaka
23	Recompression method applied for soft clay in Vietnam	Ground Improvement For Infrastructure Projects	Japan	Koji Suzuki
24	Determination of friction angles between soil and steel - FRP piles	Deep Foundations	Turkey	HÜSEYİN SUHA AKSOY
25	Numerical investigation on performance of quick segment joint for shield tunnel lining	Underground Construction & Tunneling	Belgium	Tao Xu

26	Effect of Vegetation Water-uptake on the Slope Stability	Ground Improvement For Infrastructure Projects	Hungary	Kieu Minh The
27	Performance of expressway embankment construction on soft ground assisted by vacuum consolidation method during trial and mass construction	Ground Improvement For Infrastructure Projects	Japan	Koki Sawano
28	Objective Functions for Settlement Predictions in Identification of Geotechnical Parameters	Monitoring, Inspection And Maintenance	Japan	Takayuki Shuku
29	Application of Mechanoluminescent Sensors to Visual Inspections for Existing Geotechnical Structures	Monitoring, Inspection And Maintenance	Japan	Takayuki Shuku
30	Regional mapping of rainfall-induced shallow landslide using a new time-variant slope stability model	Coastal Geotechnics For Climate Change	Viet Nam	Tran The Viet
31	Evaluation of deformation capacity of SC pile by the cantilever beam method bending shear test	Deep Foundations	Japan	Yujiro Tanaka
32	Stabilization of soft clay using fiber and nano materials for enhancement soil strength	Ground Improvement For Infrastructure Projects	Egypt	Ahmed Farid
33	Determination of hardening soil model parameters for modelling deep excavations in loose to medium dense sand	Underground Construction & Tunneling	Taiwan	Bin- Chen Benson Hsiung
34	EFFECT OF FINE CONTENTS ON THE LIQUEFACTION RESISTANCE OF RED RIVER DYKE FOUNDATION SAND	Ground Improvement For Infrastructure Projects	Korea	Ngo Thi Ngoc Van
35	Effect of fiber distribution on strength of cemented soils	Ground Improvement For Infrastructure Projects	Korea	Sung-Sik Park
36	Restoration of a destroyed barrier island with geotextile tubes in Taiwan	Coastal Geotechnics For Climate Change	Taiwan	Tanya Lee
37	Seismic performance of multi-anchor wall with high ground water level	Ground Improvement For Infrastructure Projects	Japan	Makoto Kobayashi
38	Ground Subsidence Risk Analysis with Intensity and Duration of Rainfall	Ground Improvement For Infrastructure Projects	Korea	Changho Choi
39	Experimental Observation of Ground Cavity Formation due to Defect in Storm Water Pipe	Ground Improvement For Infrastructure Projects	Korea	Jinyoung Kim

40	Alternative Study of Underground Station Structure on Hanoi Metro Line 2	Underground Construction & Tunneling	Viet Nam	Luu Xuan Hung
41	Project review and Construction method on Ho Chi Minh Metro Line 3A	Underground Construction & Tunneling	Japan	Chitoshi Izumi
42	Identifying the geological scenario ahead of the tunnel face: The use of elastoplastic and elastodynamic responses	Underground Construction & Tunneling	Germany	Nguyen Than Luan Tamara Nestorović
43	Dynamic Amplification Effects of Cut-and-Cover Tunnel Structure	Underground Construction & Tunneling	Korea	Duhee Park
44	Backfilling of intake and discharge structures using fluidized soil-cement mixture with air form and fly ash	Ground Improvement For Infrastructure Projects	Japan	Hidetake Matsui, Hiroyasu Ishii
45	Management of excavated soils from tunnelling works	Underground Construction & Tunneling	Japan	Takeshi Katsumi
46	Application of geotechnical (slope) monitoring as early warning system for hazard mitigation and risk reduction in an industrial facility in central Philippines	Monitoring, Inspection And Maintenance	Philippines	John Erickson B. Delos Santos
47	Feasibility of soil stabilization by alkaline-activated ground bottom ash	Ground Improvement For Infrastructure Projects	Korea	Dang Quoc My
48	Development of controlled low-strength materials derived from coal ash and excavated soil without using Portland cement	Ground Improvement For Infrastructure Projects	Korea	Do Manh Tan
49	Effect of moat foundation on the response of base-isolated nuclear power plant structures	Deep Foundations	Korea	Lee, Eun-Haeng
50	Embankment Constructions Applying Buoyancy-Resistant EDO-EPS blocks	Ground Improvement For Infrastructure Projects	Japan	Mikihiko Shintani
51	The Design of the Underground Sections of the Metro Lines 5 and 6 in Ho Chi Minh City. Risks, Challenges and their Mitiaation	Underground Construction & Tunneling	Spain	Pablo de la Puente
52	Leveling with mobile 3D-laser scanner to measure differential settlement at D-runway of Tokyo Haneda Airport	Monitoring, Inspection And Maintenance	Japan	Yoichi Watabe
53	Advantage of Instrumented Lateral Load Tests using Strain Gages and Shape Acceleration Array for Designing Drilled Shafts in Shale	Deep Foundations	USA	Minh D. Uong

54	In-situ monitoring of ground subsidence behaviour of Chuoswei River Alluvial Fan-Delta (CRAFD) in Taiwan	Monitoring, Inspection And Maintenance	Taiwan	Muhsiung Chang
55	Experimental study on critical velocity of groundwater flow in underground construction by artificial ground freezing	Deep Foundations	Taiwan	Ren-chung Huang
56	Prediction of deformation for monopile foundation under horizontal cyclic multi directional loading	Deep Foundations	Germany	Viet Hung Le
57	Study on The Vibration Characteristics and Empirical Model Parameters of Ningbo Typical Soft Soil	Underground Construction & Tunneling	China	Yao-yue Fang
58	Rotating cylinder test for evaluation of hydraulic resistance characteristics of compacted weathered granite soil	Coastal Geotechnics For Climate Change	Korea	Kim, Young-sang
59	APPLICATION OF THE STEEL PIPE PILES WITH SLIP LAYER FOR THE PIPE FOUNDATIONS ON THE SOFT GROUND	Deep Foundations	Japan	Kosuke Gotoh
60	Application of Cement Deep Mixing method in some Thermal Power Plant projects along Hau river, Vietnam	Ground Improvement For Infrastructure Projects	Viet Nam	Dao Trieu Kim Cuong
61	Development and Application of Cement Deep Mixing Method in Vietnam	Ground Improvement For Infrastructure Projects	Viet Nam	Dao Trieu Kim Cuong
62	Physical and Chemical Characterizations of Bottom Ash for Geotechnical Application	Ground Improvement For Infrastructure Projects	Korea	Taeki Kim
63	Research on resistance factor of bearing capacity for Steel Rotation Pile foundation in Vietnam	Deep Foundations	Viet Nam	Dao Duy Lam
64	Design for Deep Shaft Excavation with Adjacent High Slopes in Urban Area of Hong Kong	Underground Construction & Tunneling	Hongkong	Nguyen Thuy Mai Khanh
65	Long-term evaluation of local salinity deposition on steel members for bridge maintenance	Monitoring, Inspection And Maintenance	Japan	Hiromichi Shirato
66	Study on The Rockburst Mechanism Failure Process in high in situ stress and Its Application in Underground engineering	Underground Construction & Tunneling	Viet Nam	DinhPhuc Hoang
67	0206 Meinung earthquake- induced settlement of shallow founded buildings in Taiwan and the on-going soil improvement	Ground Improvement For Infrastructure Projects	Taiwan	Lu, Chih-Wei
68	Centrifuge Modeling and Application of Piles on Thin Bearing Layers with Medium Depth	Deep Foundations	Japan	Yoshihiro Horii

69	Influence of grass cover on the infiltration of unsaturated volcanic soil slope	Monitoring, Inspection And Maintenance	Japan	Nguyen Binh Thanh
70	Tavira harbour building: comparison of soil improvement with stone columns and vertical drains	Ground Improvement For Infrastructure Projects	Portugal	Claudia Santos
71	Ericeira south cliffs: risk analysis and proposed stabilization	Coastal Geotechnics For Climate Change	Portugal	Monica Cabral
72	Evaluation of disturbances in microtunnelling using process simulation	Underground Construction & Tunneling	Viet Nam	Dang Trung Thanh
73	Experimental analysis on Axial and Lateral behaviors of non-welded composite piles using pile load test	Deep Foundations	Korea	Jae Hyun Park
74	Experimental study on Scour-protection using Hydraulic model experiment	Deep Foundations	Korea	Jae Hyun Park
75	The increasing of storage capacity of Aljustrel mines tailing dam	Monitoring, Inspection And Maintenance	Portugal	Alexandre Santos-Ferreira
76	Some aspects of dredging small harbours and navigation channels and use of dredged materials	Coastal Geotechnics For Climate Change	Portugal	Alexandre Santos-Ferreira
77	Analysis of a Rainfall-Triggered Landslide and Determination of Critical Cumulative Rainfall for Landslide Warning in Southern Thailand	Monitoring, Inspection And Maintenance	Thailand	Tanaphot Jiratananuvong
78	The micromechanical features of shear bands in sandy soils subject to normal fault offsets	Coastal Geotechnics For Climate Change	Viet Nam	Le Hoang Khanh
79	Diaphragm wall as a mitigation technique to reduce ground settlements induced by tunnelling	Underground Construction & Tunneling	Italy	Sebastiano Rampello
80	Development of the MultiFan shape jet grouting method of ground improvement	Ground Improvement For Infrastructure Projects	Japan	Takashi Shinsaka
81	Evaluation of soft clay-cement column interface strength and its application in settlement analysis	Ground Improvement For Infrastructure Projects	Japan	Arima Wataru
82	Geotextile Encased Sand Column - A solution for Construction in Soft Soils	Ground Improvement For Infrastructure Projects	India	Yogendra Tandel
83	Development of N-DJM method	Ground Improvement For Infrastructure Projects	Japan	Takeharu Konami

84	The implementation of a navigation channel in Guadiana River	Coastal Geotechnics For Climate Change	Portugal	Alexandre Santos-Ferreira
85	Development of a dynamic soil-structure interaction technique for seismic analysis of pile-supported LNG storage tanks	Deep Foundations	Korea	Son, Il-Min
86	Finite element modelling of a bi-directional pile test	Deep Foundations	Viet Nam	Phung Duc Long
87	Practice and Experience in Deep Excavations in Soft Soils of Ho Chi Minh City, Vietnam	Underground Construction & Tunneling	Viet Nam	Dr. Nguyen Kiet Hung
88	Plan and construction of 1st METRO Line in HCMC - Initial Experiences of Underground works in the crowded City Centre	Underground Construction & Tunneling	Viet Nam	CUONG Le Van
89	Characterization and Intrinsic Compression of Soft Bangkok Clay along a N-S Section in the Lower Chao Phraya Plain	Ground Improvement For Infrastructure Projects	Thailand	Krit SAOWIANG
90	Optimization of Shear Strength Parameters of soft Soil in Deep Excavation Engineering based on Elastic Foundation Beam	Underground Construction & Tunneling	China	QU Ruo-feng
91	Development of cornstalk-derived PVD and its performance from a laboratory test	Ground Improvement For Infrastructure Projects	Thailand	Panu Promputthangkoon
92	Effect of Sand Cushion Thickness on Improving the Stability of Geosynthetic Reinforced Slopes Subject to Rainfalls	Ground Improvement For Infrastructure Projects	Taiwan	Vo-Duyen-Anh Huynh
93	Erosion-Deposition current phenomena of the Coastal areas of Viet Nam Northern delta region	Coastal Geotechnics For Climate Change	Viet Nam	Nguyen Song Thanh
94	Long-term Horizontal Cyclic Bearing Behaviour of Bucket Foundations in Saturated Loose Sands.	Coastal Geotechnics For Climate Change	Korea	Ssenyondo Vicent
95	Problems of cycled head-down pile load tests in soft soil region	Deep Foundations	USA	Nguyen Minh Hai
96	Prevention of mistakes at the design and the construction of deep foundations	Deep Foundations	Germany	Rolf Katzenbach
97	Analysis of pile-supported piers and wharves with soil-structure interaction consideration by stiffness matrix method	Deep Foundations	Viet Nam	Phan Dung

98	Overall Stability of Braced Excavations in Clay	Underground Construction & Tunneling	Viet Nam	Bill Tuan-Nghia Do
99	Eco – Friendly Raft Pile System – An Innovative Foundation System for Infrastructures on Soft Soil	Ground Improvement For Infrastructure Projects	Malaysia	Som Pong Pichan
100	Use of irregular configuration of underground columns for reduction of lateral flow of softened soil	Underground Construction & Tunneling	Japan	Ikuo TOWHATA
101	Effect of time on the evolution of soil behaviour: new advanced triaxial creep cell experiments	Ground Improvement For Infrastructure Projects	UK	K. M. A. AL HAJ
102	Permeability of clogged and unclogged pervious concretes based on experiments	Coastal Geotechnics For Climate Change	Korea	Maricris Jalmasco
103	Geotechnical Considerations of Deep Excavation Design for TBM Bore-Through with a Case History in Kuala Lumpur	Underground Construction & Tunneling	Malaysia	Chia Weng Boon
104	Carbonization effect on strength characteristics of cement solidified contaminated soil	Ground Improvement For Infrastructure Projects	China	PAN Lingling
105	Effect of Montmorillonite content on the bearing capacity of soft ground improved by deep cement mixing columns using laboratory scale model	Ground Improvement For Infrastructure Projects	Viet Nam	Nguyen Ngoc Thang
106	A Study on Ground Motion Soil Vibration due to of Traffic Loading	Ground Improvement For Infrastructure Projects	Indonesia	Rini Kusumawardani
107	A study on correlation between compression index and liquid limit, in situ water content and void ratio	Ground Improvement For Infrastructure Projects	Bangladesh	Md. Wasif Zaman
108	Experimental research on the long-term bearing behavior of post-grouting bored cast-in-place pile in sand	Deep Foundations	China	Gong Weiming
109	Research on application of O-Cell test in different deep foundation Projects	Deep Foundations	China	Dai Guoliang
110	Base layers treated with cement in urban roads - application of dynamic cone penetration	Ground Improvement For Infrastructure Projects	Brazil	Vanessa Corrêa de Andrade
111	A pore water pressure model for cyclic shear strain on clays, concerning the effect of number of cycles and Atterberg's limits	Coastal Geotechnics For Climate Change	Viet Nam	Tran Thanh Nhan

112	Risk management procedure in the construction of deep foundations	Deep Foundations	Portugal	Pedro Paraíso da Mata
113	SUSTAINABLE EMBANKMENTS ON STEEP SLOPES –DESIGN AND EXECUTION	Ground Improvement For Infrastructure Projects	Austria	Dipl.-Ing. Andreas Brandner
114	Cost Analysis For Heavy Equipment in Earthfill Work – An optimization of heavy equipment fleet	Ground Improvement For Infrastructure Projects	Indonesia	Muhammad Faizal Ardhiansyah Arifin
115	Ofir spit (Portugal): An assessment of geotubes performance in coastal protection	Coastal Geotechnics For Climate Change	Portugal	Daniela Palma
116	Application of long-chain polymer slurry as soil stabilization in reverse circulation drilling system	Underground Construction & Tunneling	Malaysia	Gonçalo António de Araújo Costa
117	Simulation Analysis of Stress and Displacement of One Giant Caisson	Ground Improvement For Infrastructure Projects	China	WANG Zhengzhen
118	Liquefaction mitigation using various ground improvement methods. A case study: Christchurch, New Zealand	Ground Improvement For Infrastructure Projects	New Zealand	Senthuran Arulanantham
119	Development and application of steel pipe pile installation by inner excavation with an enlarged foot protection	Deep Foundations	Japan	Yoshiro Ishihama
120	A computer-aided subsurface database for HCM City's groundwater and land subsidence analysis	Underground Construction & Tunneling	Viet Nam	Ta Thi Thoang
121	Laterally loaded test research for pile with upper soil grouted	Deep Foundations	China	Guangming Yu
122	Numerical simulation and situ test study on bearing behaviour of large diameter steel pipe piles of offshore Wind Farm	Ground Improvement For Infrastructure Projects	China	Jiang XU
123	Geotechnical aspects of construction and ground improvement for the Hanoi-Hai Phong Expressway	Ground Improvement For Infrastructure Projects	Viet Nam	Le Thu Hanh
124	Pullout performance of the inclined ground anchors installed in the complicated marine deposit of Quang Ninh, Vietnam	Monitoring, Inspection And Maintenance	Viet Nam	Nguyen Phuong Duy
125	Trends in Ground Improvement	Ground Improvement For Infrastructure Projects	Sweden	Bo Berggen
126	PIPE JACKING – A solution for Hanoi's infrastructure project	Underground Construction & Tunneling	Viet Nam	Tran Quang Duc

127	Research on engineering geological conditions to serve underground space development in the Hanoi area	Underground Construction & Tunneling	Viet Nam	Ta Duc Thinh
128	The applicability of distributed optical fiber sensor (FOS) in monitoring strain and temperature in a drilled shaft	Monitoring, Inspection And Maintenance	Viet Nam	Nguyen Tien Dung
129	Assessment of engineering-geological characteristics of Hochiminh city	Ground Improvement For Infrastructure Projects	Viet Nam	Doan Ngoc Toan
130	Analysis on Innovative Prestressed Support System of Deep Excavation	Underground Construction & Tunneling	Viet Nam	Pham Van Minh
131	Study on failure processes of rock tunnel by model tests and numerical analyses	Monitoring, Inspection And Maintenance	Viet Nam	Ba Thao
132	Diaphragm wall – Case analysis of deflection and result comparison	Underground Construction & Tunneling	Viet Nam	Pham Quoc Dung
133	Fallacies in Piled Foundation Design	Deep Foundations	Canada	Fellenius
134	Model Test and Full-Scale Field Test	Deep Foundations	Japan	Yukihiro Ishihara
135	Pull-out Resistance of A Large Diameter Steel	Deep Foundations	Japan	Yukihiro Ishihara
136	INVERSE ANALYSIS TO EVALUATE YOUNG'S MODULUS FOR DEEP EXCAVATION IN SAND	Underground Construction & Tunneling	Viet Nam	Quy Lam Nguyen
137	Construction Risk Control for Deep Excavation in Urban Areas	Underground Construction & Tunneling	Viet Nam	Le Quang Hanh
138	Multi-level bidirectional load test on the bored pile for the Cao Lanh Bridge	Deep Foundations	Viet Nam	Phung Duc Long
139	A new method for determination of parameters of fully grouted rock bolts in tunneling	Underground Construction & Tunneling	Viet Nam	Quang-Phich Nguyen
140	back analysis of loading tests of instrumented	Deep Foundations	Viet Nam	Trinh Viet Cuong
